

Bell IP VPN Enterprise

A simple way to respond to future demands

At Bell, we understand how important it is for your network to easily adapt to future innovations and market demands. To know that your Wide Area Network (WAN) is taken care of so you can focus on growing your business. That's what *Bell IP Virtual Private Network (IP VPN) Enterprise* is all about. A comprehensive service that enables you to be agile and respond rapidly to your customers.

With Bell IP VPN Enterprise, you benefit from flexibility, responsiveness and economy unmatched by traditional WAN solutions. As a fully managed, outsourced service, IP VPN Enterprise simply eliminates the need to purchase equipment or train employees in maintaining a private WAN. Able to accommodate any number of users, and offering three classes of service on demand, Bell IP VPN Enterprise ensures that you are in control of your connectivity – now and in the future. And because our service separates customers over our IP backbone, instead of merely relying on encryption, you receive the highest level of security for your communications.

Bell IP VPN Enterprise also provides secure, simple worldwide connections for mobile and remote employees with one single point of contact. This Remote Access Service enables you to expand your business into the global marketplace by connecting you with branch offices, employees, suppliers and even customers in locations around the world.

Choose Bell IP VPN Enterprise for easy, customized service

Bell makes networking easy. With Diversity Options that increase availability and uptime, and improved traffic management with Load Sharing, your Bell IP VPN Enterprise can accommodate growth and seasonal fluctuations instantly and cost-effectively.

Bell's IP VPN Enterprise features make it possible for you to enhance productivity, or reach new markets, with a solution that fits your current business model and adapts to meet future challenges.

Bell IP VPN Enterprise features:

Turn-key WAN Service eliminates the cost and hassle of deploying and maintaining your own private WAN while providing the same policies and security of a private, fully meshed network.

Differentiated Service Levels allow you to choose from Standard, Priority or Near Real-Time service levels on a daily or monthly basis, so you can tailor your service to match new or occasional applications.

Bandwidth on Demand gives high-speed sites the option to change bandwidth within an hour to respond to customer expectations and easily meet seasonal or periodic business fluctuations without paying for provisional bandwidth.

Consolidation of Data, Voice and Video allows you to reduce travel costs by using multicast technology for meetings, and as all applications can reside on one network, you'll enjoy lower costs than with multiple network services.

Global Services provides one seamless global service to your employees, offices, partners and customers across the world so you can set your sights on where to grow, instead of worrying about how.

Load Sharing maximizes your bandwidth by sharing the traffic load across two links and ensures greater availability where diversity is required or when connecting from small branch sites to hosted applications.

Bell IP VPN Enterprise optional features:

Internet Access uses the same router and access as the IP VPN Enterprise service at your chosen site so you don't have to order and manage a separate Internet service; you can simply re-distribute access to all locations through the VPN.

Inter-Operability gives you the option to combine high and low speed sites onto a single high performance network so you can leverage your existing technology in smaller branch offices, and maintain a unified network.

DSL Access allows you to increase business productivity with up to 3 Mbps download and 640k upstream speeds.

Diversity Options ensure that your mission critical sites receive the highest availability through increased redundancy and alternate site access.

Multiple VPNs create and enforce security policies across businesses and departments by creating VPN communities.

Extranets give you a secure and seamless outlet for communicating with customers, suppliers and partners, allowing you to design your network to best fit your business requirements.

Bell IP VPN Enterprise simplifies your WAN

It's easy to do business with Bell. We make it simple by offering Order Management Tracking, Service Level Reports and online Usage Reporting so you can actually see that we're delivering on our service commitment. Most of the IP VPN Enterprise features are free of charge with the service. And Bell takes care of the WAN portion of your network so you can focus on growing your business. With Bell, your connectivity is supported by the most extensive, 100% digital, high-capacity, optical network in Canada. Our superior network performance, backed by 3,000 network engineers, technicians and support professionals, protects and enhances your critical business functions while giving you maximum reliability and uptime. Bell is committed to evolving our IP VPN Enterprise service through ongoing investment and service enhancements. And as a total solution provider, we offer superior customer service and an ever-expanding footprint.

The ability to expand your network potential. Responsively. And responsibly. That's simply good business.
