

# Installation Waiver for Intelligent Lines, ISDN PRI/DEA and CENTREX

**Bell West will waive the installation fees for local access service when the customer is bringing local access product to the Bell West network that will be serviced by Bell West On-Net similar or upgraded products.**

The following Criteria must be met for Waiving of Installation on a line-by-line basis:

- The customer is migrating local access lines from a competitor to the Bell West network (Prime and/or Collocate);
- The customer is installing any combination of Intelligent Lines, PRI, DEA and/or CENTREX; and,
- The customer has signed a one-year or greater contract.

If the customer is adding additional on-net local access services at the same time that the migrated lines are being installed (i.e. same service order, same premise visit), the standard Bell West on-net service and installation charges will also be waived for these additional lines. Any additions subsequent to the initial installation order will be subject to the standard installation rates posted in the respective product Price Book.

If the customer is adding any resold products (example, resold DID trunks, BRI) during the customer move, then standard resale service charges and/or installation charges will apply for these resold services and will be billed to the customer.
